Reduce Damage in the Transportation Chain

Have you experienced damaged products during shipments at Impact-O-Graph Devices? One of the main concerns amongst Distribution and Shipping Managers is unidentifiable causes of damage to products while they are in transit. If you don't monitor your goods, insurance companies are much less likely to reimburse you for your losses.

According to a recent study published by The Supply Chain Management Faculty at The University of Tennessee, *Managing Risk in the Global Supply Chain*, 100 percent of supply chain executives acknowledged insurance as an effective risk mitigation tool. The same report notes that if loss or damage occurs while the shipment is being monitored, some insurers will even reimburse the full sales value of the entire shipment rather than just the cost of goods.

Impact-O-Graph Devices Digi-Shock GT is a tamper-proof device that can determine chain of custody and the extent of all impacts and temperature breaches during transit.

Our line of impact, temperature and tilt indicators and monitors can identify and locate trouble spots within the entire transportation chain from manufacturing, storage, while in transit or while equipment is in use. Our low-cost Shock Indicator Labels are a highly visible deterrent to product mishandling while also providing a visual indication when your products have been dropped or mishandled.

Contact us today and receive a **FREE sample with demonstration.**

Impact-O-Graph Devices has a complete line of products for your transportation monitoring needs.
